

About AlarmNet 360™

AlarmNet 360 is the next generation of AlarmNet® Direct. It is a cloud management platform that dramatically streamlines and simplifies the way you do business, from account setup and control panel programming* to registering radios, enabling Honeywell Total Connect® Remote Services and identifying great new revenue opportunities. It works on computers, tablets or smartphones—enabling anytime, anywhere system programming and management. It's a virtual game changer.

AlarmNet 360 has a modern, clean look and feel with a “tour” that will guide you through the process. It is maintenance free—there are no servers to maintain and no software versions to download, as updates are provided automatically.

Take advantage of our Reports Dashboard which provides useful business intelligence data for business owners, executives and managers that can help grow your customer base and reduce attrition.

AlarmNet 360 delivers numerous benefits:

- Cloud hosted access means no software to load or maintain
- Simple graphical user interface (GUI) makes installations easier
- Pre-programmed templates help make programming effortless and virtually error-free
- The Reports Dashboard drives additional sales and RMR
- Program the entire system and enable all services anytime, anywhere; from any computer or mobile device—even before the installation.*
- Program communicators, services, the Lyric™ Controller and LYNX Touch 5200, 5210, 7000 control panels and peripherals on one simple platform
- Anywhere, anytime system management and control:
 - Remotely check the control panel and sensor status, including battery life, and upload event logs to investigate issues anytime—without having to roll a truck
 - Get all the account information you need and make changes to the system anytime, from anywhere
 - The ability to respond quickly helps keep customers satisfied while keeping costs low
